

QAMind AI

Quality assurance, with a mind of its own.

QAMind AI generates, runs, and reasons about your tests — surfacing flaky cases and real bugs before your users do. This system defines how the brand looks, reads, and feels.

01 THE LOGO

The Logo

QAMind AI is a wordmark — no icon. Set in Bricolage Grotesque, it's warm, modern, and a little human. “QAMind” carries the name; “AI” is always set in terracotta as the one accent. Let the type do the work.

QAMind AI

On dark
Default — product & marketing

QAMind AI

On light
Light surfaces & documents

THE AI ACCENT
“AI” is always terracotta (#C2552E). “QAMind” is ink on light, cream on dark. Never reverse this.

CLEAR SPACE
Keep space equal to the cap-height of the “Q” on all sides. Don't crowd the wordmark.

MINIMUM SIZE
Wordmark ≥ 96px wide on screen, ≥ 20mm in print. Below that, increase weight for legibility.

WHAT NOT TO DO

QAMind AI

✗ Don't recolor “AI” — it's always terracotta.

QAMdAI

✗ Don't squeeze or expand the letter-spacing.

QAMind AI

✗ Don't add shadows, glows, or effects.

QAMind AI

✗ Don't place it on low-contrast backgrounds.

02 ICONOGRAPHY & APP ICON

Iconography & App Icon

The wordmark doesn't fit a 16px browser tab, so the brand compresses to a single letter — the Bricolage “Q,” with its characterful tail. Use it only where the full wordmark can't go: favicons, app icons, avatars.

INTERFACE ICONS

Product icons use the Lucide set — 1.75px stroke, rounded caps and joins. Keep them in the current text color (cream-soft on dark, ink-soft on light); reserve terracotta for the single active item.

03 COLOR

Color

Terracotta is the one true accent — it carries every action. Everything else is a warm neutral: paper creams in light mode, espresso browns in dark. Semantic colors stay muted and earthy, never clinical.

04 TYPOGRAPHY

Typography

Bricolage Grotesque is the brand voice — warm, characterful, a little human — for the logo, headlines, and big numbers. Hanken Grotesk keeps body and UI clean and friendly. IBM Plex Mono labels the technical layer: eyebrows, run IDs, metadata.

05 THE SYSTEM IN USE

The System in Use

The brand applied. Cards stay quiet and warm; Bricolage carries the metrics; terracotta marks the one action that matters. Earthy semantic tints signal state without shouting.

06 VOICE & MESSAGING

Voice & Messaging

We write like a thoughtful senior engineer: warm, precise, and quietly sure of the craft. We make hard things clear and never reach for hype.

PRIMARY TAGLINE

Quality assurance, with a mind of its own.

Alternates: “Tests that think.” “The mind behind better software.” “Find the bugs before your users do.”

Precise

Specific over vague — “cut flaky tests 60%,” not “dramatically better.” Real numbers, real outcomes.

Confident

We trust the craft. Direct, calm statements. No hedging, no buzzword soup.

Human

Quality is genuinely hard. We're clear about trade-offs and never condescending.

WE SAY

✓ “QAMind AI caught 14 regressions in this PR.”

✓ “Coverage is at 73%. Here's the gap.”

✓ “This test is flaky — here's why, and the fix.”

WE DON'T SAY

✗ “Revolutionary AI-powered synergy.”

✗ “Effortlessly 10x your quality!”

✗ “The world's smartest testing platform.”
